***Specification***

1. The disclosure is objected to because of the following informalities: On Page 16, last paragraph instead of "while", it should read white.

Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by applicant's admitted prior art as found on pages 1-3 of the specification (See Background of The Invention).

Applicant has stated that pressure sensitive adhesive tapes generally have a colored layer disposed on one side of the substrate film or have a colored pressure sensitive adhesive layer (Page 2, lines 3-6). According to the applicant, in general, a white layer is disposed on the backlight side in order to reflect the light from the backlight, and a black layer is disposed on the liquid crystal display module side in order to prevent the light from leaking out to the LCD surface (Page 2, lines 6-10). Additionally, the applicant teaches that in order to reconcile light reflecting properties and light shutting properties with such a pressure sensitive adhesive tape, it is necessary to superpose many colored layers (Page 2 line 26, Page 3 line 27-30).

Art Unit: 1771

The color layers superposed on each other is considered as a substrate. The substrate film is considered as a supporting substrate.

The applicant teaches that the pressure sensitive adhesive tape employing a transparent substrate film has a white layer disposed on the backlight side and a black layer disposed on the liquid crystal display module side (Page 2, lines 20-25).

According to the applicant, LCDs of the internal/external dual lighting type which are employed in cell phones and the like include a liquid-crystal display module unit and a backlight unit which are fixed to each other with pressure sensitive adhesive tape (Page 1, lines 10-14).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art as found on pages 2-3 of the specification (See Background of The Invention) in view of Anzaki et al. (US Patent 6,014,196).

The applicant's admitted prior art is disclosed before. The admitted prior art is silent with respect to teaching that the layer of a color other than white and black is a silver layer.

The invention of Anzaki et al. discloses a transparent electrically conductive film attached to a transparent substrate of a display element (see Abstract). This invention is suitable for use in liquid crystal display device. The transparent film disclosed in the invention of Anzaki et al. is formed by successively laminating a first reflection preventing layer, a metal layer comprising silver, and a second reflection preventing layer from the substrate side (Column 2, lines 6-15). According to Anzaki et al., Silver has high visible light transmittance (Column 1, lines 46-48). In addition to having high visible light transmittance, silver layer can be used as reflective layer.

A skilled artisan would have found it obvious to use a layer of silver in the claimed invention. One would be motivated to do that because a layer of silver will act as light transmitting layer and light reflecting layer.
